                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=95229621; PubMed=7713909;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COFACTOR: CONTAINS ONE FAD PER HOMODIMER.

PATHWAY: PENULTIMATE STEP IN HEME AND PORPHYRIN BIOSYNTHESIS.

SUBUNIT: HOMODIMER.

SUBCELLULAR LOCATION: BOUND TO THE MITOCHONDRIAL INNER MEMBRAN
WITH ITS ACTIVE SITE FACING THE CYTOSOLIC: SIDE (BY SIMILARITY)

TISSUE SPECIFICITY: EXPRESSED IN HEART, BRAIN, PLACENTA, LUNG,
LIVER, SKELETAL MUSCLE, KIDNEY, AND PANCREAS.

LIVER SKELETAL MUSCLE, MUSCLE, KIDNEY, AND PANCREAS.

LIVER SKELETAL MUSCLE, KIDNEY, BANCREAS.

```

```
cc which is a ligand for the G-protein coupled orphan receptor designated cc GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant cc ligand polypeptide. The ligand polypeptide, and its fragments, modulate cc function of the pituitary, central nervous system, pancreas and other ctissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a cc gample and to raise antibodies. They may also be used therapeutically, ce.g. to treat senile dementia: Alzheimer's, Parkinson's or Huntington's cd diseases; Creutzfeld-Jakob disease; polsoning by heavy metals or drugs; cd diseases; schizophrenia; disorders of growth hormone secretion; cancer; creptomatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals cc armying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of cd disease, for drug screening and as source of cell lines The ligand completes in receptor-binding assays; for production of Ab and can be used for the preparation of anti-ligand polypeptide encoding sasays; for production of Ab and can antiscra; in drug development; for gene therapy and to develop transgenic animals. Sequences AAM95174 to AAW95178 represent antigenic epiotpes which can be used for the preparation of anti-ligand polypeptide encoding sasays; for production of Ab and complete encoding sasays; for production of Ab and compl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This peptide contains the partial C-terminal sequence of the synthetic CC ligand polypeptide 1992-131 which is capable of binding to a G composition coupled receptor protein. This peptide is used as an antigen to CC protein-coupled receptor protein. This peptide is used as an antigen to CC prepare rabbit anti-bovine 1992-131 antibodies which are used in binding CC assays. Pharmaceutical compositions containing this ligand may be used CC as a pituitary function modulator. This ligand could have specific CC or a pancreatic function modulator. This ligand could have specific CC applications as a prophylactic or therapeutic agent for dementia, CC depression, hyperkinetic syndrome, disturbance of consciousness, anxiety CC syndrome, schizophrenia, trauma, growth hormone secretory disease, CC hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, cc renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, CC hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, CC spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral CC degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis cand/or oligogalactia. Assays can also be developed to screen compounds CC which are capable of altering the binding activity of the ligand CC affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The gents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, aborrmal agents for motherity fetus, abnormal agents for motherity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW97229-31 represent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulatin prolactin secretion which comprises a ligand polypeptide or a salt, it a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Monoclonal pituitary;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.
               The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or derivative. The antibodies can be used in diagnosis or to treat or

                                                                                                                                           The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Q
                                                This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the Sequence represented in ANW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a comply considered to the specific applications as a comply lactic or therapeutic agent for dementia, depression, hyperkinetic compositions, consciousness, anxiety syndrome, schizophrenia, comply light hormone secretory disease, hyper-and polyphagia, compression, hypercholesterolaemia, hyperclidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, polyphagia, compression to the schaemia, epilepsy, asthma, rheumatoid arthritis, spinal injury, conscient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, conscient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, conscient brain also had be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-SEP-1996;

                                                                                                                                   cc compositions containing this ligand may be used as a pituitary function compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function cm modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, ctrauma, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hypergrounds and injury, cc Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, cathen brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, collogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting cativation of the G protein-coupled receptor protein.

                                                                                 CC derived ligand corresponding to amino acid residues 34 to 53 of the compositions of the Greener in AAW31368 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. a containing this ligand may be used as a pituitary function modulator. CC central nervous system modulator or a pancreatic function modulator. CC flis ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, cc disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, cc growth hormone secretory disease, hyper- and polyphagia, cc hypercholesterolaemia, diabetes, cancer, pancreatitis, renal disease, hyperpolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperpolactinaemia, diabetes, cancer, pancreatitis, spinal injury, cc transient brain ischaemia, amylotrophic lateral sclerosis, acute myocardial infarction, spinocerebellar degeneration, bone fracture, cr myocardial infarction, spinocerebellar degeneration, bone fracture, cr myocardial infarction, spinocerebellar degeneration, bone fracture, cc and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                                                                                                                                                        prolactions, infertility, impotence, amenorrhea, galactorrhea, acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents function can be used for treating or preventing choriccarcinoma, hydatid mole, irruption mole, abortion, unthrifty fet abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                           fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease, prolactionam, infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a bovine pituitary-derived ligand fragment. It is used in the course of the invention. The specific

                                                                                                                                                                                                     The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodistac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, anenorrhea, galactorrhea, caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

                                                                                                                                                                                                                                                                               The present sequence represents a human type ligand fragment. It

Is used in the course of the invention. The specification describes

an agent for modulating prolactin secretion which comprises a

Cligand polypeptide or a salt, for a G protein coupled receptor (GPCR)

protein. The agents for promoting prolactin secretion can be used for

creating or preventing hypocovarianism, genecyst cacogenesis, menopausal

creating or preventing hypocovarianism. They can by used for promoting

creating or preventing hypocovarianism. They can by used for promoting

creating or preventing hypocovarianism. They can by used for promoting

creating or preventing secretion can be used for treating or preventing

creating prolactin secretion can be used for treating or preventing

creating prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

creating prolactinome, lyndrome, Argonz-del Castilo syndrome,

creating placental function can be used as contraceptives. The agents for

creating or preventing

creating or preventions

creating or preventing

```
which is a ligand for the G-protein coupled orphan receptor designated CC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, cc. e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; schizophrenia; disorders of growth hormone secretion; cancer; cremumatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals cC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines The ligand CC enimals. The present sequence represents a bovine genome-derived ligand collypeptide fragment which is similar to the murine ligand-polypeptide.

Expression of the polypeptide collines of the ligand collines are sequenced in the sequence of probes and primers; to identify collines are ligand polypeptide. The present sequence represents a bovine genome-derived ligand collines are sequenced in the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAW95191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide ligand for orphan G protein coupled receptors - for treating disorders of central nervous system, pituitary and pancreas, and for drug screening

                                                                                                                                    the ligand polypeptide encoding DNA are used to produce a recombinant C ligand polypeptide. The ligand polypeptide, and its fragments, modulate C function of the pituitary, central nervous system, pancreas and other c tissues and can be used to screen for agents that modulate binding of C the polypeptide to the receptor; to quantify the amount of receptor in a C sample and to raise antibodies. They may also be used therapeutically, cC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's C diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; C diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; C diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; C clabetes; schizophrenia; disorders of growth hormone secretion; cancer; C operative nutritional status and as vasopressor. Transgenic animals C carrying the ligand polypeptide encoding DNA or its mutchn are used to study the function of the polypeptide-expressing genes, as models of C disease, for drug screening and as source of cell lines. The ligand C related sequences; in receptor-binding assays; for production of Ab and C antisers; in drug development; for gene therapy and to develop transgenic animals. Sequences AAW95174 to AAW95178 represent antigenic cepiotpes which can be used for the preparation of anti-ligand polypeptide cantibody.

                                                                                                                                            This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, terrine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a bovine peptide which acts as an oxytocin secretion
                                                                                                                                       promoter
                                                                                                                                                                                                                                                                                                         Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, protein for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                             WPI; 2000-452298/39

```

score q Pred. No. No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.
